

Pythora

Autonolas Agents: Verifiable randomness & price pusher

# Pythora: The Problem that is solves

>> Autonolas agent can work as a decentralised **price pusher service** for protocols

- fetches price data from Hermes API
- pushes price on-chain regularly

Agents can work as 'sovereign agent'

- decentralised (when run  $\geq 1$  instance)
- easy to spin-up

# Pythora: The Problem that is solves

>> Autonolas agents can work together and **form a consensus on which agent is going to perform the next price update**
